Foreword	13
Introduction	16
World Map	20
Chapter 1: The Negative Consequences of the Global War on Drugs	
1. The Failure of the War on Drugs: An Overview	22
<i>Ethan Nadelmann</i>	
The war on drugs is a failure. Prohibition has been a mistake, and the better approach is not demand reduction but harm reduction.	
2. The Afghan Poppy War Is Fueling an Insurgency	32
<i>Simon Jenkins</i>	
The war on drugs in Colombia has been futile and will also fail in Afghanistan, where the Taliban will become empowered, and the result will be wasted spending and casualties.	
3. Mexico's Plight Worsens Despite Military Intervention in the War on Drugs	39
<i>The Drug Reform Coordination Network</i>	
Military support sent by President Calderón into Mexico's cities to prevent violence is failing. The occupation is hurting the economy, violence is on the rise, and human rights abuses are now transpiring.	
4. The Colombian Paramilitary Presence Is Still a Threat Despite Drug War Efforts	49
<i>Vanda Felbab-Brown</i>	
Although Colombian President Álvaro Uribe's demobilization plan has shown some success, evidence exists that demobilized paramilitary groups engaged in drug trafficking continue to persist.	
Periodical Bibliography	55

Chapter 2: The Failure of Drug Prohibition Strategies

1. A Long History of Failure with Prohibition: 57
An Overview
Alfred W. McCoy
Prohibition is a failed policy, resulting in many problems—defoliation, military strife, forced migration, mass incarceration and human rights violations, economic woes, and the spread of HIV.
2. The **Afghan** Drug War Cannot Be Won 65
Through Eradication and Prohibition
Transnational Institute
With Afghan opium production at record levels, eradication and prohibition policies do not deal with the reality of the global demand for heroin.
3. **Colombia's** Eradication Policies Are in 77
Need of Change
Chris Kraul
After years of eradication efforts that have done little to curtail the flow of cocaine, Congress will be trying a softer approach, funding alternative development programs to encourage farmers to grow legal crops and avoid joining armed groups.
4. The **United Kingdom's** Failed Policy of 84
Prohibition Yields a Criminal Justice Crisis
Transform Drug Policy Foundation
Prohibition is a failed policy that has maximized harm. The laws that prohibit drug use and the increasing demand for drugs has created a crisis in the United Kingdom's criminal justice system.

5. The **United States’** Meth Crackdown Is Counterproductive and Displaces Production to Mexico 96

Kari Huus

As the United States has ramped up on lab raids and has focused on restricting sales of products containing pseudoephedrine, the void is being filled by international drug cartels, with many “super labs” cropping up in Mexico.

- Periodical Bibliography 104

Chapter 3: Environmental Degradation Due to Drugs and Eradication Methods

1. The Production of Drugs Is Causing Global Environmental Damage 106

United States Drug Enforcement Administration

From the clearing of rain forests for coca crops, to deforestation in the United States for marijuana, to hazardous waste dumping from meth production, the environment is suffering the harsh consequences of drug production.

2. **American** Meth Labs Pose a Hazardous Threat to the Environment 111

Ben Arnoldy

There are environmental hazards associated with home meth labs, and the United States is developing laws to manage these potential risks.

3. **Yemen’s** Addiction to Qat Is Exhausting Its Water Supply 117

Jonathon Walz

Yemen must address environmental concerns caused by the country’s production and consumption of Qat. One-third of its groundwater extraction is used to cultivate the crop, leading to a potential water crisis.

4. **Colombia's** Legal Crops and Forests Are
Wrongly Destroyed by Eradication 123
Bill Weinberg
Environmental problems are resulting from fumigation flights intended to destroy drug crops, including the destruction of legal food crops and forests, erosion, and poisoning to animals and residents.
5. **Ecuadorians** Are Suffering DNA Damage 130
from Aerial Spray Eradication
Stephen Leahy
U.S.-funded aerial spraying of coca plantations in Ecuador has not only damaged the environment but has severely damaged the DNA of local residents.
6. **Colombia and Afghanistan** Are Potential Targets 136
for a Dangerous Biologically Engineered Fungus
John Otis
Colombia and Afghanistan could soon become targets for biologically engineered killer fungi that would destroy coca and opium. Controversy has resulted due to concerns that it could prove catastrophic, wiping out other plant species.
- Periodical Bibliography 143

Chapter 4: Alternative Policies to Prohibition

1. Legalization Is the Only Viable Option 145
to Drug Prohibition
Jeffrey A. Miron
The full legalization of drugs is the best alternative to prohibition. Regulation, decriminalization, and medicalization have drawbacks that legalization can avoid.
2. The **United Kingdom** Should 154
Decriminalize Drugs
Kailash Chand
Decriminalization will reduce the harm drugs cause because addicts are treated as patients. Regulated legalization would help solve prison overpopulation.

<p>3. The United Kingdom Should Not Decriminalize Drugs <i>Joseph A. Califano Jr.</i> Decriminalization will make illicit drugs cheaper, easier to buy, and more acceptable to use. There are many dangers of addiction, including mental illness associated with the use of cannabis.</p>	159
<p>4. The Netherlands Demonstrates Temperance Through Decriminalization <i>Andrew Stuttaford</i> A very lenient policy of decriminalization in the Netherlands demonstrates restraint among cannabis users and has helped the country avoid the political, social, and economic costs of the drug war.</p>	164
<p>5. Canadians Are Unnecessarily Challenged in Obtaining Medical Marijuana <i>Connie Howard</i> Users of medical marijuana in Canada face unnecessary bureaucracy to acquire licenses to purchase the drug.</p>	171
<p>6. Bolivia's Criminalization of Coca Should Be Overturned <i>Danna Harman</i> The coca leaf plays a role in many aspects of Bolivian society, and the criminalization of coca is detrimental to the country's economy.</p>	176
<p>Periodical Bibliography</p>	182
<p>Chapter 5: Fighting Drugs Through Harm Reduction Strategies</p>	
<p>1. Harm Reduction Reduces Drug Use and Restores Human Dignity <i>Drug Policy Alliance</i> Harm reduction policies seek to reduce harms from drug addiction and maximize their potential benefits, such as in the case of medical marijuana.</p>	184

2. Harm Reduction Encourages Drug Use and Is Dehumanizing <i>Theodore Dalrymple</i> Harm reduction policies are “inherently infantilizing” and displace responsibility for addicts.	188
3. Canada’s Safe-Injection Program Is Curtailing Abuse and Saving Lives <i>Mark Follman</i> Vancouver, British Columbia, has helped decrease drug use through a program that helps street addicts shoot up under safe supervision.	195
4. The United States’ Ban on Needle Exchange Programs Is Contributing to the Spread of HIV/AIDS <i>James E. Loyce Jr., Adrian Tyler, and Malik Russell</i> Providing clean needles and treatment for injection drug users is beneficial. The ban Congress has placed on fund- ing for needle exchange programs is no longer rational given the spread of HIV/AIDS.	208
5. Australia Will Not Benefit from Harm Reduction <i>Don Weatherburn</i> Harm reduction strategies in Australia will only confuse the public and evade the real problems with drug policy that need resolution.	214
6. The United Kingdom’s Obsession with Criminalization Maximizes Harm <i>Danny Kushlick</i> Current policy in the United Kingdom criminalizes drugs to reduce social harm, but making drugs illegal is in- creasing demand for them.	220
7. Sweden’s Zero-Tolerance Policy Is a Good Model for Scotland <i>Gillian Bowditch</i> Sweden’s zero-tolerance approach has been rejected by Europe as unrealistic, but it would be a better model for Scotland.	225
